CHICAGO (Dow Jones)--U.S. soybean futures stumbled Wednesday, breaking away from the broad-based strength in the commodity sector on a lack of fresh supportive news to underpin prices.

The market had nothing new to rekindle bullish enthusiasm as the factors that led prices higher previously from Chinese demand and yield uncertainties is old news, said Tim Hannagan, analyst with P.F.G. Best in Chicago.

The market is more focused on what the 2010 U.S. crop size will be. However, with the heart of the harvest still a couple of weeks away, participants were not willing to lock in new long positions ahead of an extended U.S. holiday weekend, Hannagan said.

Futures initially bounced in step with a broad-based commodity rally on weakness in the U.S. dollar renewed speculative buying to begin the month.

Meanwhile, the market has seen China backing off U.S. purchases recently. Also, with a system bringing crop-finishing rains to the western and central Midwest, diminishing moisture concerns for soybeans outside of the Delta region, buyers were cautious.

Nevertheless, traders seem content to wait for harvest reports before taking on added risk. Spread activity was featured as well, with traders buying corn against selling soybeans amid trade thoughts that corn has more risk of lower yields than soybeans at this point, Hannagan added.

Traders will keep a close eye on private yield and production forecasts ahead of next week's government crop forecasts, with commodity brokerage firm FCStone scheduled to release its latest estimate Wednesday afternoon.

Chicago Board of Trade September soybeans ended 3 1/2 cents, or 0.3%, lower at \$10.04 1/2, and November soybeans, the most-active contract ended 4 1/2 cents, or 0.4%, lower at \$10.05 1/2. Speculative funds were estimated sellers of 4,000 lots. Fund activity is a measure of investment money flow in the market.

The U.S. Department of Agriculture's weekly export sales report will be released at 8:30 a.m. EDT Thursday.

Analysts surveyed by Dow Jones Newswires estimate soybean sales for the week ended Aug. 26 to be in the range of 550,000 to 950,000 metric tons. Soybean export sales are seen at between 75,000 and 325,000 tons, while soybean sales are pegged at between zero and 25,000 tons.

Soy Products

Soy product futures ended mixed, with soybean managing to divorce itself from the bearish theme in the rest
